ITRC 2-DAY CLASSROOM TRAINING

Petroleum Vapor Intrusion: Fundamentals of Screening, Investigation, and Management

October 10-12, 2017 in Ann Arbor, Michigan

The class is hosted by Michigan DEQ and includes the 2-day ITRC PVI class (Oct. 10-11) and optional Bonus Day 3 (Oct. 12) led by Michigan DEQ focused on vapor intrusion in Michigan.

- Learn to use a science-based approach to screen-out sites for the petroleum vapor intrusion pathway and focus resources on those sites that truly represent at risk.
- Learn the difference between chlorinated (hydrocarbon) vapor intrusion (CVI) and petroleum (hydrocarbon) vapor intrusion (PVI) and why it matters.
- Hear about EPA's Technical Guide For Addressing Petroleum Vapor Intrusion At Leaking Underground Storage Tank Sites (June 2015). The ITRC PVI guidance document and EPA PVI guide are complementary documents with the ITRC training course providing the "how-to" knowledge and skills for screening, investigating, and managing the petroleum vapor intrusion pathway.

"The USEPA and ITRC PVI guides serve to complement each other. USEPA's guide provides a framework for decision making and the ITRC guide contains a greater level of technical detail along with a broader scope." - US EPA
