

2027

NEW PROJECT TEAMS

Bioremediation Technologies

TEAM START: JANUARY 2027

GOAL: Improve the understanding and implementation of bioremediation technologies and supporting cleanup decisions through remedy selection, optimization, transition, and closure.

PFAS Anthropogenic Background Considerations

TEAM START: JANUARY 2027

GOAL: Build upon existing background guidance and published literature to summarize challenges to be considered for differentiating anthropogenic background PFAS concentrations from known site-specific PFAS releases.

Brines and Produced Water

TEAM START: JUNE 2027

GOAL: Develop guidance for managing, treating, and reusing brackish water, brines, and produced water with a focus on treatment technologies, practical management approaches, potential end uses, and residuals management.
